Out-of-the-box video conferencing

Take the complicated out of conference rooms with GoToRoom

Everything you need, ready to go.

When the technology perfectly fits the meeting space, it's an amazing experience. Teams can get together easily without worrying about the equipment. GoToRoom is the out-of-the-box video conferencing solution specifically designed for collaboration in huddle spaces and medium-sized conference rooms. Wherever your workforce chooses to meet, they'll be ready to get real work done.

What does the kit include?

GoToRoom ensures that you can get a meeting underway on day one, no third-party investments needed. Crystal-clear audio, high-definition video, screen-sharing capabilities and a user-friendly interface make for seamless collaboration.

Easy to set up. Easier to use.

After completing the turnkey, 15-minute hardware setup, GoToRoom is officially ready to use. Unlike other "out-of-the-box" solutions, the GoToRoom software is pre-configured to the Intel NUC beforehand. That means when the software connects to the network (via Ethernet cord), it will automatically look for additional updates and start up. From there it's as simple as using the touch-panel display options to join or start a meeting instantly.

Order your own:

Ready to roll out simple, clear video conferencing in your meeting rooms? **Contact your account representative** or **call us at 888 646 0014** to get started.
